

## Japanese Airspace Changes to take effect **July 18** 2019

In an effort to enhance efficiency, Japanese airspace has undergone a redesign for the Tokyo terminal area. This includes both arrivals and departures for Haneda (HND) and Narita (NRT). The changes take effect on **July 18**.

Pilots should be extra vigilant as the procedures in the navigation database may not be updated for a **July 18** arrival. Crews should advise ATC if they are unable to comply with a clearance and request radar vectors.

All flights transiting Japanese airspace on **July 18** must have a new **July 18** navigation database.

The Japanese Civil Aviation Bureau (JCAB) is aware of the potential issues and will provide assistance.
